

GEN4+ Private Cloud Has Arrived

Your guide to taking advantage
of the latest innovations in technology

EvolutionON | Always Available. Always ON.
Systems

Introduction

Evolution Systems has been providing cloud capabilities for over 15 years. In 2020, we architected our 4th generation of private cloud infrastructure, which we call GEN4, to bring you some of the best technology available today. **And now we are taking it one step further.** Our customers' needs are what drives us – and when it comes to business-critical applications, we'll never let them down. **Which is why we are now releasing GEN4+ to enhance our private cloud once again. #EVOGEN4+**

Here are the 5 key reasons why you should take advantage of **GEN4+** and migrate your business-critical applications.

01 Functionality

04 Security

02 Flexibility

05 Experience

03 Scalability

01

Functional infrastructure when you need it

Get ready to experience a secure, dedicated private cloud environment with the latest IBM Power9 hardware, Nutanix HCI, together with networking components and fastest storage currently available to run your IBM i, Windows and Linux services under one solution.

Of the organisations using cloud services, more than **75%** indicate they have a cloud-first strategy.

Gartner

02

Flexible infrastructure that's **continuously updated & improved**

Leverage all benefits of scale and regular infrastructure without capital expenditures and get access to the latest upgrades, advances in technology and **GEN4+** performance on a convenient monthly subscription basis.

Over **80%** of Enterprises
will close their traditional
Data Centres by 2025.

IBM

03

Resources you can easily scale up & down on demand

No matter the reason or frequency, it's important that you can adjust your environment accordingly and have your ongoing costs reflect that. You need a cloud that allows you to access resources on demand, allowing you to scale up and down to satisfy your ever-changing workloads and ensuring you only pay for what you need.

Over **61%** of new cloud users reported greater business efficiencies due to ease of scalability.

IDC

04

Secure by design for your peace of mind

Built from the ground-up on our own infrastructure and hosted within Tier III and Tier IV data centres located in Australian capital cities, we operate, comply with and exceed our clients' ongoing high expectations for information security by continuing to adhere to and actively maintain our ISO/IEC 27001 certification ensuring our clients' data sovereignty.

It is predicted that **95%**
of cloud security failures
will be the customers' fault.

Gartner

05

Expert consultants when you need them the most

Proactive private cloud customer experience to always deliver the right service for the right job, when required on demand. Evolution Systems clients get full access to expert consultants and our customer service centre is available 24x7 to assist your business within accountable Service Level Agreements. Consume these services remotely or on-premise.

77% of SMBs use managed services in some capacity instead of an internal IT department.

TechTarget

If you have questions about moving your applications to the cloud, we can help.

Evolution Systems is Australia's leading provider of IBM i in the cloud and has been offering IBM Power virtual machines since 2010. With each generation of our IBM Power cloud platform more powerful than the last and allowing users to do more with less, we have now architected our latest generation of private cloud infrastructure - GEN4+ including the latest hyper-converged infrastructure for Windows and Linux applications to bring our clients some of the best technology available today. We also offer a choice of managed service packs to make sure you're getting just the right amount of support to match your business requirements.

Let's talk about supporting your company's application needs in the cloud with #EVOGEN4+
